

Measuring the Design Decisions of an Open-Source Post-Quantum HSM Chip

ML-KEM-512 NTT and Keccak, from a Python golden model to a SKY130 layout

Nguyen Tan Dat · University of Science, VNU-HCM (HCMUS) · IEEE SSCS Code-a-Chip, ISSCC 2027

run it in Colab

What did each architectural decision made for the ASIC actually cost in area, latency and energy, what does the design still leak, and can anyone re-derive those numbers with open tools?
