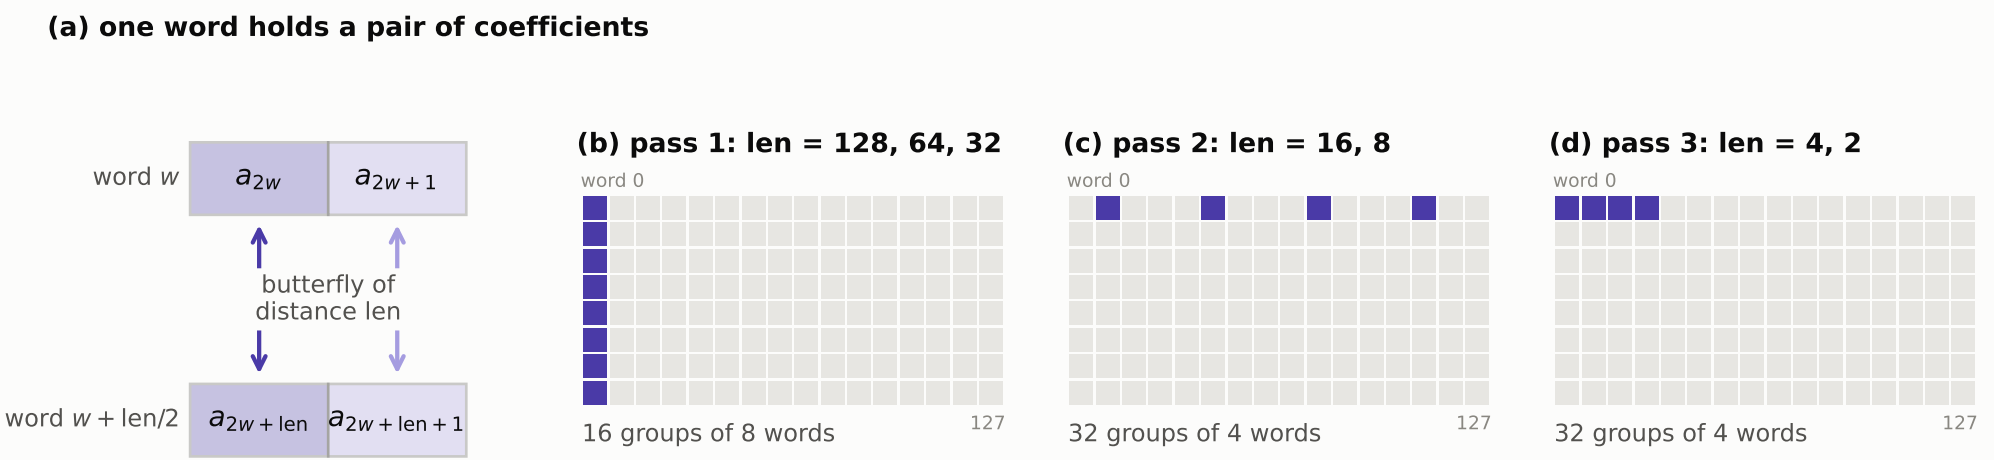
Iteration 2, packed pairs and fused layers: each pass reads and writes all 128 words once

the 128 words of the 24 × 128 macro, 16 per row; purple: the words of one group, transformed together in a register bank; iteration 3 fuses 3 + 4 layers in two passes



24-bit word = two 12-bit coefficients; len ≥ 2, so the two halves never meet
