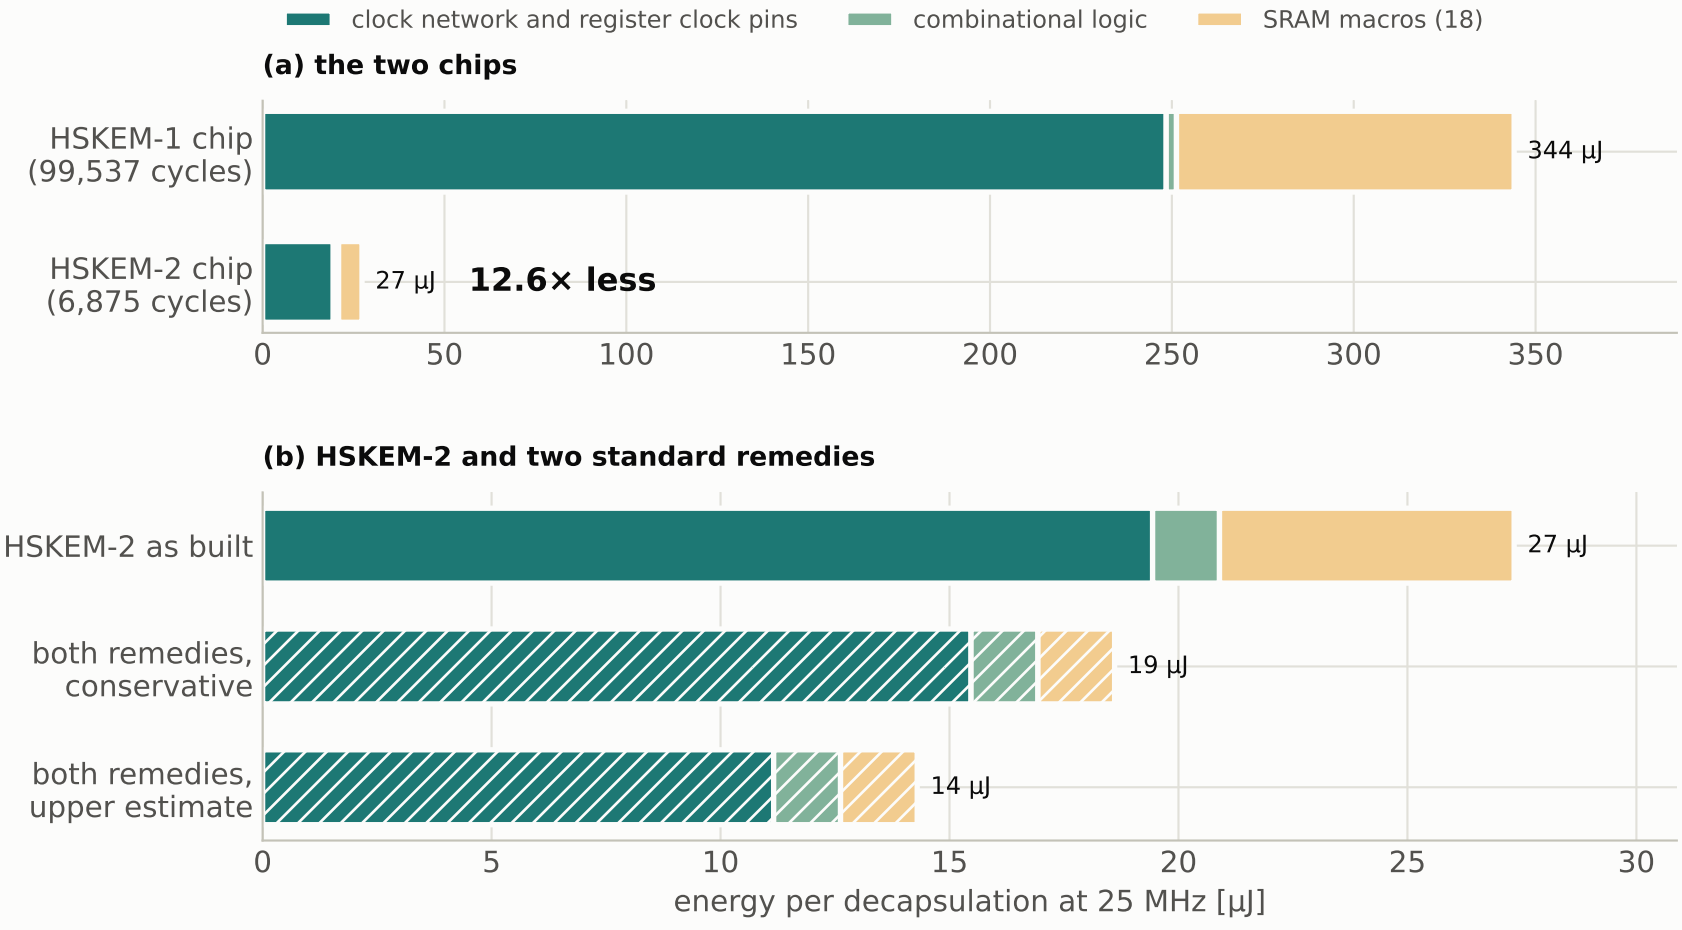
HSKEM-2 needs 12.6× less energy per decapsulation than HSKEM-1



Post-layout estimate at the typical corner, logic from zero-delay activity. Hatched bars of (b) are projections from the simulated activity, not changes to HSKEM-2.

Data: results/fullchip/rev_c/power.json, sram_energy.json; HSKEM-1: results/fullchip/first_chip/
